Continuation Sheet (PTO-303)

Application No.

The applicant argues that the Hwang reference does not dislose a method wherein the a number of transmittable channels of a counterpart communication apparatus is obtained by transmitting data to a counterpart wireless apparatus through a plurality of frequency channels

The examiner respectfully disagrees. As is well known in the art when a mobile station registers with a base station or during handoff, a fundamental channel is assigned and this is indicated also in the Hwang reference on page 5, paragraph 1. This fundamental channel is assigned to carry voice signals.

Further, as discussed on page 8 of the Hwang reference, controller 101 processes the messages received on a forward dedicated control channel, the said message related to packet data service i.e. message indicating number of supplemental channels required by the counterpart wireless apparatus to transmit data, thus obtaining a number of transmittable channels of a counterpart communication apparatus after transmitting information (i.e. voice signals here on a fundamental channel) to a counterpart wireless apparatus through a plurality of frequency channels,

Therefore the rejection of the claims discussed in the previous office action is considered proper.
